

Course: IT114-010-S2025

Assignment: IT114 Java Problems

Student: Hector M. (hem)

Status: Submitted | Worksheet Progress: 110.00%

Potential Grade: 11.00/10.00 (110.00%)

Received Grade: 0.00/10.00 (0.00%)

Grading Link: <https://learn.ethereallab.app/assignment/v3/IT114-010-S2025/it114-java-problems/grading/hem>

Instructions

1. Ensure you read all instructions and objectives before starting.
2. Create a new branch from `main` called `M2-Homework`
 1. `git checkout main` (ensure proper starting branch)
 2. `git pull origin main` (ensure history is up to date)
 3. `git checkout -b M2-Homework` (create and switch to branch)
3. Copy the template code from here: [GitHub Repository - M2 Homework](#)
 - It includes Problems 1-4 and a `BaseClass`. Put all into an `M2` folder or similar (adjust package reference at the top if you chose a different folder name).
 - Immediately record to history
 - `git add .`
 - `git commit -m "adding M2 HW baseline files"`
 - `git push origin M2-Homework`
 - Create a Pull Request from `M2-Homework` to `main` and keep it open
4. Fill out the below worksheet
 - Each Problem requires the following as you work
 - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
 - Initial outline/plan of how you'll solve it via comments (add/commit after this stage)
 - Code solution (add/commit periodically as needed)
5. Once finished, click "Submit and Export"
6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 1. `git add .`
 2. `git commit -m "adding PDF"`
 3. `git push origin M2-Homework`
 4. On Github merge the pull request from `M2-Homework` to `main`
7. Upload the same PDF to Canvas
8. Sync Local
 1. `git checkout main`
 2. `git pull origin main`

Section #1: (2 pts.) Problem 1 - Odds

Task #1 (2 pts.) - Edit the `printOdds` method to output odd values

Combo Task:

Weight: 100%

Objective: Edit the `printOdds` method to output odd values of the array

Details:

- Only make edits where noted via provided comments
- Challenge: Print odd values only in a single line separated by commas
- Step 1: sketch out plan using comments (include ucid and date)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Item:#1

Weight: 40%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program

Image Prompt

```
1 // Edit the printOdds method to output odd values of the array
2 // Example: [1, 2, 3, 4, 5, 6, 7, 8, 9, 10] should output 1, 3, 5, 7, 9
3
4 // Use a boolean to handle printing commas
5 boolean first = true;
6 // Loop with a for-each loop to iterate over the different numbers in the array.
7 for (int num : arr) {
8     // Add an if statement to check, skipping the even numbers from the odds
9     // Use a boolean to handle printing commas
10    if (num % 2 != 0) {
11        // Use a boolean to check whether to print a comma
12        if (!first) {
13            System.out.print(", ");
14        }
15        // Conditional and finish off the for loop
16        System.out.print(num);
17        first = false;
18    }
19 }
20 // Print a new line at the end of the loop
21 System.out.println();
22 // End solution code
```

My code/solution for problem1 of the hw

```
1 // Edit the printOdds method to output odd values of the array
2 // Example: [1, 2, 3, 4, 5, 6, 7, 8, 9, 10] should output 1, 3, 5, 7, 9
3
4 // Use a boolean to handle printing commas
5 boolean first = true;
6 // Loop with a for-each loop to iterate over the different numbers in the array.
7 for (int num : arr) {
8     // Add an if statement to check, skipping the even numbers from the odds
9     // Use a boolean to handle printing commas
10    if (num % 2 != 0) {
11        // Use a boolean to check whether to print a comma
12        if (!first) {
13            System.out.print(", ");
14        }
15        // Conditional and finish off the for loop
16        System.out.print(num);
17        first = false;
18    }
19 }
20 // Print a new line at the end of the loop
21 System.out.println();
22 // End solution code
```

Item:#3

Weight: 40%

Details:
Briefly explain how the code solves the challenge (note: this isn't the same as what the code does)

Briefly explain how the code solves the challenge (note: this isn't the same as what the code does)

≡ Text Prompt

Your Response:

My code loops through the array of numbers given, and for each item in the list it checks if it is odd or even through remainder division. Since the output is a string, if the number is odd it concatenates to the number to an empty string, if its even it concatenates a comma with a space after to gramatically list the numbers properly.

Section #2: (2 pts.) Problem 2 - Sum

Task #1 (2 pts.) - Edit the `sumValues` method to sum the array values

Combo Task:

Weight: 100%

Objective: Edit the `sumValues` method to sum the array values and present them in a format with exactly two decimal places

Details:

- Only make edits where noted via provided comments
- Challenge 1: Sum all the values of the passed in array and assign to total
- Challenge 2: Have the sum be represented as a number with exactly 2 decimal
- Example: 0.1 would be shown as 0.10, 1 would be shown as 1.00, etc
- Step 1: sketch out plan using comments (include ucid and date)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Item:#1

Weight: 40%

Weight: 40%

Details:
Briefly explain how the code solves the challenges (note: this isn't the same as what the code does)

Text Prompt

Your Response:

To solve challenge one I used a for each loop to go through each number in the array and added them one by one to an integer variable with an initial value of zero. This was how I got the initial total of the arrays. Then for the second challenge to format it to the second decimal place I took the initial total variable and formatted it using String.format and then assigning that to the variable modifiedTotal.

You

I used a for loop to iterate through the list of items in the array with if else statements to check for the type of data the code was handling. I then used the math.sqrt value function and at the end of

type of data the code was handling. I then used the math absolute value function and at the end of each condition I concatenated it the filtered output to the list. I struggled however to do this with the string types and cant figure it out

Briefly explain how the code solves the challenges (note: this isn't the same as what the code does)

≡ Text Prompt

Your Response:

This one took too much trial and error and I hated it. But basically I made a string to contain the original untouched string. Then I took said original text and used the replaceAll function and singled out all of the necessary characters out of this original string assigning this new value to a cleanedText Variable. The next thing I did was clean the text further using to the toLowerCase and split function to make the next uniform in case and also separate it through spaces. Then I used a String Builder to create the new string that would be outputted using functions like toUpperCase to get the first letter to be upper case now that their all lower case. then I put that output into the modifiedPhrase variable.

Task #2 (+ 0.90 pts.) - Edit the `transformText` method to solve the

Combo Task:

Weight: 45%

Objective: Edit the `transformText` method to solve the extra credit challenge (challenge 4)

Details:

- Only make edits where noted via provided comments
- Challenge 4: Extract middle 3 characters (beginning starts at middle of phrase)
- Assign result to 'placeholderForMiddleCharacters'
- If not enough characters assign "Not enough characters"
- Step 1: sketch out plan using comments (include ucid and date)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Item:#1

Weight: 40%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program

Image Prompt

```
Problem 1: "Extract middle characters"
// not enough characters, assign "not enough characters"
function extractMiddleCharacters(inputString) {
  if (inputString.length < 3) {
    return "not enough characters";
  }
  const middleIndex = Math.floor(inputString.length / 2);
  const middleChar = inputString[middleIndex];
  const middleStr = inputString.substring(middleIndex - 1, middleIndex + 1);
  return middleStr;
}

// Test cases
console.log(extractMiddleCharacters("Hello World")); // Output: "llo"
console.log(extractMiddleCharacters("Java Programming")); // Output: "v"
console.log(extractMiddleCharacters("123456789")); // Output: "456"
console.log(extractMiddleCharacters("a")); // Output: "not enough characters"
console.log(extractMiddleCharacters("")); // Output: "not enough characters"

Problem 2: "Calculate Average"
// Hello world, Java programming, this is a little case test, capitalise every word, midl case (not)
function calculateAverage(arr) {
  if (arr.length === 0) {
    return 0;
  }
  let sum = 0;
  for (let i = 0; i < arr.length; i++) {
    sum += arr[i];
  }
  return sum / arr.length;
}

// Test cases
console.log(calculateAverage([1, 2, 3, 4, 5])); // Output: 3
console.log(calculateAverage([10, 20, 30, 40, 50])); // Output: 30
console.log(calculateAverage([1, 2, 3, 4, 5, 6, 7, 8, 9, 10])); // Output: 5.5
console.log(calculateAverage([1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20])); // Output: 10.5

Problem 3: "Check Palindrome"
// Hello world, Java programming, this is a little case test, capitalise every word, midl case (not)
function isPalindrome(str) {
  const reversedStr = str.split('').reverse().join('');
  return str === reversedStr;
}

// Test cases
console.log(isPalindrome("Hello World")); // Output: false
console.log(isPalindrome("Java Programming")); // Output: false
console.log(isPalindrome("123456789")); // Output: false
console.log(isPalindrome("a")); // Output: true
console.log(isPalindrome("")); // Output: true

Problem 4: "Calculate Average"
// Hello world, Java programming, this is a little case test, capitalise every word, midl case (not)
function calculateAverage(arr) {
  if (arr.length === 0) {
    return 0;
  }
  let sum = 0;
  for (let i = 0; i < arr.length; i++) {
    sum += arr[i];
  }
  return sum / arr.length;
}

// Test cases
console.log(calculateAverage([1, 2, 3, 4, 5])); // Output: 3
console.log(calculateAverage([10, 20, 30, 40, 50])); // Output: 30
console.log(calculateAverage([1, 2, 3, 4, 5, 6, 7, 8, 9, 10])); // Output: 5.5
console.log(calculateAverage([1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20])); // Output: 10.5
```

Output has the extra credit in it

Saved: 2/17/2025 3:44:49 PM

Item:#3

Weight: 50%

Details:

Briefly explain how the code solves the extra credit challenge (note: this isn't the same as what the code does)

Text Prompt

Your Response:

The extra credit was easier basically I just added a condition that checks the length of the word, so if its less than 3 there are no middle letters there is no output. Then to find the middle of the word I took the length of the word and divided it by 2 then subtracted by 1 assigning this value to a variable called midLength. Then to actually find the middle of the word I called the modified phrase once again using the substring function with the numbers as parameters being the aforementioned midlength variable and the midlength plus or minimum value of 3.
